

FOR IMMEDIATE RELEASE:

RemoteDash Releases Mileage Reporting Application

SAN DIEGO – January 5, 2015 - RemoteDash is pleased to announce their new software application, RDMiles Tracks, which allows users to quickly and accurately record their driving miles for expense reporting and tax purposes.

Ray Calhoun, CEO & CPA, stated, “Keeping track of your mileage for business and tax purposes just became really simple. Users can set up their alerts to get a quick text for every trip and then record them with a touch of the screen. Nothing to log into or search. At the end of a cycle or year, you can download it to an Excel spreadsheet to become an integral part of your record keeping system.”

Mark Jones, President, stated, “RDMiles Tracks adds to our suite of vehicle monitoring applications that enable services that assist consumers. With RDMiles Tracks, you can record any trip as it occurs, or do a one-time end-of-year mileage calculation that will save hours if not days of documentation.”

About RemoteDash
