

## **FOR IMMEDIATE RELEASE:**

### **RemoteDash Releases New Teenage Driver Monitoring Application**

SAN DIEGO - July 28, 2014 - RemoteDash is pleased to announce their new tracking application, RDTeen Tracks, is available for sale and immediate delivery. RDTeen Tracks allows parents to monitor the speed and location of their vehicles in real time and to receive alerts when limits are exceeded.

Ray Calhoun, CEO, stated, "Teenage drivers have more accidents than any other age group which is also the number one cause of death for teenagers. Being able to sit down with your new driver and playback their actual driving history on your PC, tablet or smart phone can have a dramatic impact on their behavior. We all want to trust our children but it is also our duty to verify that trust."

Mark Jones, President, commented, "Monitoring with the RDTeen Tracks system has been shown to reduce the risks associated with teenage driving. Further, our monitoring device can be installed by parents in seconds, the monitoring is simple and not time consuming, the system provides ancillary information such as mileage, fuel usage, and other vehicle operating information, and our pricing is affordable for all families."

#### **About RemoteDash**
